

FIELD NOTE № 1

Skills should produce
artifacts,
not markdown.

A Claude Code skill we just open-sourced.

 swipe through →

THE PROBLEM

The markdown ceiling.

Most agent skills end at "here's a markdown summary." That's where the useful part should start.

A dashboard

isn't text. You scan it.

A comparison

isn't text. You sort it.

A status page

isn't text. You refresh it.

A mockup

isn't text. You iterate on it.

— a recurring pattern
while building Ikenga's
exec views

THE SHIP

Single-file HTML artifacts.

Four hard rules:

01 One file, self-contained.

No build, no folder of assets.

02 Renders offline.

Mock data declared inline. No network needed.

03 Renders anywhere.

file://, claude.ai's artifact viewer, the Ikenga shell.

04 Declarative data sources.

Supabase / SQL / fetch / MCP / file-watch.

Live data inside the shell. Same file. Different host.

THE FOUR REFERENCES

What ships with the skill.

hello-world*smallest valid*

~150 lines · 1 source

The smoke test. Smallest possible artifact.
Opens in any browser.

cfo-daily*finance dashboard*

~330 lines · 4 sources

KPI tiles, AR aging, FX, cash-by-account. 4
source types.

ceo-overview*exec digest*

~470 lines · 6 sources

Six-section daily digest. Cross-artifact
links. The shape most real artifacts take.

ikenga-symbol*editorial scrollytelling*

~1000 lines · 12 cites

A 4,000-word writeup as an artifact.
Museum images, citations, hand-curated.

CASE IN POINT

An .md replaced by an artifact.

BEFORE

A long markdown writeup.

- 4,000 words
- No structure for citations
- Images live in a folder
- Easy to skim past

AFTER

ikenga-symbol.html

- 1,000 lines self-contained
- 12 numbered, clickable citations
- Wikimedia museum images, inline
- Interactive pins + tab comparator
- Scrollytelling, on purpose

Open in any browser → `artifacts.ikenga.dev/ikenga-symbol`

THE INSTALL

One command.

```
npx skills add Royalti-io/ikenga-artifact-builder
```

Works in:

- **Claude Code**
- **Codex**
- **Cursor**
- **OpenCode**

+ 50 more, via the open agent-skills CLI (skills.sh).

Apache-2.0. PRs welcome.
